Dear University Representative:

METU NCC Sustainable Environment and Energy Systems Graduate Program, which has been established as a unique academic program in the Middle East to serve the most critical needs of our globe in the 21st century, proudly presents the **International Project Competition (IPC) for university students**. IPC has been devised to increase and enhance the global awareness of the *Vital Triad: Sustainable Environment, Sustainable Energy, and Sustainable Water Resources*.

The competitors are expected to form a team of two, come up with an original concept for a project to tackle a sustainability problem in support of the Vital Triad, and submit their work in an essay of two thousand words in English with three to six figures. The figures can be used to describe the addressed problem, the devised solution as a system and/or a process flow. The electronic submissions through the IPC web site will be evaluated by a jury panel based on:

- i. Problem Relevance to Sustainability,
- ii. Originality, Feasibility, and Impact of Concept Solution,
- iii. Verification of Feasibility through Analysis or Experimentation,
- iv. Quality of Writing and Illustrations.

The five finalist teams will be invited to METU NCC (all expenses paid) for five days in June 2013 to present their project in front of the jury. The winner team will earn the title of "Green Brain of the Year, 2013". In addition to attending a guided tour in Northern Cyprus as finalists, the first, second, and third runner-up team members will be rewarded 1000, 750, and 500 Euros respectively.

We would like to hereby invite talented university students to submit their projects to IPC 2013, and start contributing ideas to a sustainable future for our beautiful globe.
